2013 *VOLT*

CONFIDENCE TO GO THE DISTANCE

IT'S ELECTRIC WHEN YOU WANT IT, GAS WHEN YOU NEED IT

With two sources of energy for propulsion, Volt is unique in the world of electric vehicles. This built-in-America¹ wonder lets you drive gas-free and tailpipe-emissions-free for an EPA-estimated 38 miles. Then enjoy the spontaneity of extending your range, thanks to the gas-powered electric generator that turns on – seamlessly – so you can go up to 380 total miles with a full charge and a full tank of gas.²

HAPPIEST *owners* on the PLANET

“I bought the car because I could eliminate gas² from my budget, and it's been 4,000 miles since my last trip to the gas station² I absolutely love my Chevy Volt.”
–Noble, Alexandria, VA

“I am probably going to the gas station about once a month.”²
–Priya, Los Angeles, CA

“You will feel the torque. You will feel yourself being pushed back into your seat as you accelerate forward.”
–Eric, West Nyack, NY

HOW TO CHARGE VOLT

You just plug it in. A 120V portable charging unit comes standard. Plug it into an electrical outlet³ and fully charge the battery in 10–16 hours, depending on charging level and outside temperature. The available professionally installed 240V charging station speeds up charging time to about 4 hours.

CHAMPION OF THE CHARGE

Enjoy 900 miles on average between fill-ups. That's right. By charging regularly, Volt owners are averaging 900 miles or about one month between fill-ups.² Volt is changing minds about dependency on gas – and turning heads with its good looks.

Volt was recognized by J.D. Power and Associates as having the “Highest Ranked Vehicle Appeal among Compact Cars, Two Years in a Row”⁴ in the 2012 Automotive Performance, Execution and Layout (APEAL) Study. The study

evaluated the exterior styling, seating and storage space, comfort, convenience and other factors. Volt also boasts an impressive test-track top speed of 100 mph – and the acceleration is smooth, quick and powerful. With no traditional transmission to soak up power, 273 lb.-ft. of low-end torque shoots directly to the tires.

¹ Volt is assembled in Hamtramck, MI, from U.S. and globally sourced parts. ² EPA-estimated 98 MPGe (electric); 35 MPG city/40 highway (gas). Actual mileage may vary. ³ Using the portable 120V charge cord will take approximately 16 hours at the 8-amp default setting, and can be reduced to 10 hours at the 12-amp setting. ⁴ The Chevrolet Volt received the highest numerical score among compact cars in the proprietary J.D. Power and Associates 2011 and 2012 Automotive Performance, Execution and Layout (APEAL) Study.SM Study based on responses from 74,759 new-vehicle owners, measuring 233 models and measures opinions after 90 days of ownership. Proprietary study results are based on experiences and perceptions of owners surveyed in February–May 2012. Your experiences may vary. Visit jdpower.com.
